By heterocyclic residue is meant a 3 to 8, preferably 5 to 8, membered saturated or unsaturated heterocyclic ring comprising 1 to 4 heteroatoms selected from N, O and S, e.g. tetrahydrofuryl, tetrahydropyranyl, aziridinyl, piperidinyl, pyrrolidinyl, piperazinyl. The heterocyclic residue may also be fused to an optionally substituted aryl or heteroaryl, e.g. phenyl, wherein Y is bound to said aryl or heteroaryl; examples include e.g. benzo[1,3]dioxolyl.

Compounds of formula I may exist in free form or in salt form, e.g. addition salts with e.g. inorganic acids, such as hydrochloride, hydrobromide or sulfate, salts with organic acids, such as acetate, fumarate, maleate, benzoate, citrate, malate, methanesulfonate or benzenesulfonate salts. Compounds of formula I and their salts, in hydrate or solvate form are also part of the invention.

When the compounds of formula I have asymmetric centers in the molecule, various optical isomers are obtained. The present invention also encompasses enantiomers, racemates, diastereoisomers and mixtures thereof. For example, the central carbon atom bearing R<sub>1</sub>, R<sub>3</sub> and NR<sub>4</sub>R<sub>5</sub> may have the R or S configuration. Compounds having the following 3-dimensional configuration are generally preferred:

Moreover, when the compounds of formula I include geometric isomers, the present invention embraces cis-compounds, trans-compounds and mixtures thereof. Similar considerations apply in relation to starting materials exhibiting asymmetric carbon atoms or

unsaturated bonds as mentioned above, e.g. compounds of formula II, III or IV as indicated below.

In the compounds of formula I, the following significances are preferred individually or in any sub-combination:

1. X is O;
2. Y is O or S;
3. R<sub>1</sub> is CH<sub>3</sub> or CH<sub>2</sub>-OH;
4. R<sub>2</sub> is phenyl; phenyl substituted by 1 or 2 substituents selected from halogen, C<sub>1-2</sub>alkyl or C<sub>1-2</sub>alkoxy; cyanophenyl; naphthyl; or benzo[1,3]dioxol-5-yl;

7. R<sub>6</sub> is hydrogen, methoxy, methyl, or chloro; and
8. R<sub>7</sub> is hydrogen, methoxy, methyl, or chloro.

The present invention also includes a process for the preparation of a compound of formula I which process comprises

- a) for a compound of formula I wherein R<sub>3</sub> is Z-X<sub>2</sub>, X<sub>2</sub> being OH, removing the protecting group present in a compound of formula II

wherein X, n, R<sub>1</sub>, R<sub>2</sub> and R<sub>4</sub> are as defined above, R<sub>3</sub> is Z-X<sub>2</sub> wherein X<sub>2</sub> is OH and R<sub>5</sub> is an amino protecting group, or

- b) for a compound of formula I wherein R<sub>3</sub> is Z-X<sub>2</sub>, X<sub>2</sub> being a residue of formula (a), removing the protecting groups present in a compound of formula III

wherein X, n, R<sub>1</sub>, R<sub>2</sub>, R<sub>4</sub> and R<sub>5</sub> are as defined above, and R<sub>3</sub> is Z-X<sub>2</sub> wherein X<sub>2</sub> is a residue of formula (a')

(a')

wherein Z<sub>1</sub> is as defined above and each of R'<sub>8</sub> or R'<sub>9</sub> is a hydrolysable or hydrogenolysable group or R'<sub>8</sub> and R'<sub>9</sub> form together a divalent bridging residue optionally fused to a ring (e.g. benzene ring),

and, where required, converting the compounds of formula I obtained in free form into the desired salt form, or vice versa.

Process step a) may be carried out in accordance with methods known in the art. The removal of the amino protecting groups may conveniently be performed according to methods known in the art, e.g. by hydrolysis, e.g. in an acidic medium, for example using hydrochloric acid. Examples of protecting groups for amino groups are e.g. as disclosed in "Protective Groups in Organic Synthesis" T.W. Greene, J.Wiley & Sons NY, 2<sup>nd</sup> ed., chapter 7, 1991, and references therein, e.g. benzyl, p-methoxybenzyl, methoxymethyl, tetrahydropyranyl, trialkylsilyl, acyl, tert.-butoxy-carbonyl, benzyloxycarbonyl, 9-fluorenyl methoxy carbonyl, trifluoroacetyl, and the like.

In the residue of formula (a'), each of R'<sub>8</sub> and R'<sub>9</sub> may have the significance of e.g. tert-butyl, phenyl or benzyl or form together a cyclic system such as in 1,5-dihydro-2,4,3-benzodioxaphosphin.

Process step b) may be performed according to methods known in the art, e.g. by hydrolysis, e.g. in a basic medium when R'<sub>6</sub> and R'<sub>7</sub> are each a hydrolysable group, for example using a hydroxide such as barium hydroxide or in an acidic medium when R'<sub>6</sub> and R'<sub>7</sub> are each a tert-butyl group. It may also be performed by hydrogenolysis, e.g. in the presence of a catalyst, e.g. Pd/C, followed by hydrolysis, e.g. in an acidic medium, for example HCl. Compounds of formulae II and III, used as starting materials, and salts thereof are also novel and form part of the invention.

The present invention also includes a process for the preparation of a compound of formula II which process comprises transforming a compound of formula IV

IV

wherein  $R_1$ ,  $R'_3$ ,  $R_4$  and  $R'_5$  are as defined above, to introduce the desired residue  $-(CH_2)_n-Y-R_2$  e.g. by an alkylation. Alkylation of the compounds of formula IV may be performed according to methods known in the art, e.g. by nucleophilic substitution, e.g. by reaction with an alkylating agent  $R_2-Y-(CH_2)_n-X_3$  wherein  $X_3$  is mesylate, tosylate, triflate, nosylate, chloride, bromide or iodide. The alkylation may also be carried out by following the Mitsunobu protocol using  $R_2-Y-(CH_2)_n-OH$  (e.g. as disclosed in Hughes, Organic Preparations and Procedures International 28, 127-64, 1996 or D.L. Hughes, Org. React. 42, 335, 1992), in solution or on solid phase support synthesis, e.g. by attaching the compound of formula IV to a resin. Alternatively, e.g. triphenylphosphine or diethyl azocarboxylate bound to a resin, e.g. polystyrene, may be used.

Compounds of formula III wherein  $R'_8$  and  $R'_9$  form a cyclic system, may be prepared as follows:

wherein  $X$ ,  $Y$ ,  $n$ ,  $R_1$ ,  $R_2$ ,  $R_4$  and  $R'_5$  are as defined above.

Insofar as the production of the starting materials is not particularly described, the compounds are known or may be prepared analogously to methods known in the art or as disclosed in the Examples hereinafter.

The following Examples are illustrative of the invention. Melting points are uncorrected.

RT	=	room temperature
THF	=	tetrahydrofuran
DMF	=	dimethylformamide

MTBE = methyl tert.-butyl ether  
AcOEt = ethyl acetate

**Example 1:** (R)-2-Amino-4-[4-[2-(4-chloro-phenoxy)-ethoxy]-phenyl]-2-methyl-butan-1-ol Hydrochloride.

To *tert*.-butyl (R)-(3-{4-[2-(4-Chloro-phenoxy)-ethoxy]-phenyl}-1-hydroxymethyl-1-methyl-propyl)-carbamate (38 mg, 0.063 mmol) is added 4 M HCl in dry dioxane (1 mL). The clear colorless solution is stirred for 2 h protected from moisture. Then, the solution is evaporated to dryness and the partially crystalline residue is taken up in dry ether (5 mL). Sonication for 10 min gives a precipitate of colorless crystals. The product is filtered off, washed with cold ether (3 x 1 mL), and dried *in vacuo* to afford the title compound in form of a non hygroscopic colorless microcrystalline powder: HPLC:  $t_R$  = 3.17 min., ESI+ MS:  $m/z$  = 350 / 352 ( $MH^+$ ).

*tert*.-butyl (R)-(3-{4-[2-(4-Chloro-phenoxy)-ethoxy]-phenyl}-1-hydroxymethyl-1-methyl-propyl)-carbamate may be prepared according to the following procedure:

To a solution of *tert*.-butyl [(R)-1-hydroxy-4-(4-hydroxy-phenyl)-2-methyl-but-2-yl]-carbamate (100 mg, 0.34 mmol) and 1-(2-bromoethoxy)-4-chlorobenzene (120 mg, 0.51 mmol, 1.5 eq.) in anhydrous DMF (2.5 mL) is added water free caesium carbonate (166 mg, 0.51 mmol, 1.5 eq.). The suspension obtained is stirred over night protected from moisture at 60°C. After cooling to RT the solids are filtered off and rinsed with DMF (2 x 1 mL). The combined filtrates are evaporated in a high vacuum to give a dark orange syrup. Purification by flash chromatography (FlashMaster II, MTBE/hexanes gradient 0% MTBE -> 40% MTBE within 45 min, then 40% MTBE 15 min) gives colorless crystals: HPLC:  $t_R$  = 5.45 min., ESI+ MS:  $m/z$  = 450 / 452.

**Example 52:** ((R)-2-Amino-2-methyl-4-[4-(3-phenoxy-propoxy)-phenyl]-butan-1-ol Hydrochloride.

To {(R)-1-Hydroxymethyl-1-methyl-3-[4-(3-phenoxy-propoxy)-phenyl]-propyl}-carbamic acid tert-butyl (50 mg, 0.11 mmol) was added 4 M HCl in dry dioxane (1 mL). The clear colorless solution was stirred for 2 h protected from moisture. Then, the solution was evaporated to dryness and the partially crystalline residue was taken up in dry ether (5 mL). Sonication for 10 min gives a precipitate of colorless crystals. The product was filtered off, washed with cold ether (3 x 1 mL), and dried *in vacuo* to afford the title compound in form of a non hygroscopic colorless microcrystalline powder. ESI+ MS:  $m/z = 330.4$  ( $MH^+$ ).

{(R)-1-Hydroxymethyl-1-methyl-3-[4-(3-phenoxy-propoxy)-phenyl]-propyl}-carbamic acid tert-butyl may be prepared according to the following procedure:

To a solution of tert-butyl [(R)-1-hydroxy-4-(4-hydroxy-phenyl)-2-methyl-but-2-yl]-carbamate (100 mg, 0.34 mmol) and (3-bromo-propoxy)-benzene (109.6 mg, 0.51 mmol, 1.5 eq.) in anhydrous DMF (2.5 mL) was added water free cesium carbonate (166 mg, 0.51 mmol, 1.5 eq.). The suspension obtained was stirred over night protected from moisture at 60°C. After cooling to RT the solids were filtered off and rinsed with DMF (2 x 1 mL). The combined filtrates were evaporated in a high vacuum to give a dark orange syrup. Purification by flash chromatography (FlashMaster II, MTBE/hexanes gradient 0% MTBE -> 40% MTBE within 45 min, then 40% MTBE 15 min) gave colorless crystals: ESI+ MS:  $m/z = 430.4$ .

**Example 53:** (R)-2-Amino-4-{4-[3-(5-bromo-2-methoxy-phenoxy)-propoxy]-phenyl}-2-methyl-butan-1-ol Hydrochloride.

The title compound was prepared as described in example 52 using 4-bromo-2-(3-bromopropoxy)-1-methoxy-benzene instead of (3-bromopropoxy)-benzene. ESI+ MS:  $m/z = 439.3$  (M+H)<sup>+</sup>.

**Example 54:** (+/-) Mono Phosphoric acid mono-{2-amino-2-hydroxymethyl-4-[4-(3-phenoxypropoxy)-phenyl]-butyl} ester.

To a solution of (2-methyl-4-{2-[4-(3-phenoxypropoxy)-phenyl]-ethyl}-4,5-dihydro-oxazol-4-yl)-methanol (200 mg, 0.54 mmol) and tetrazole (189 mg, 2.70 mmol, 5 eq., recrystallized from toluene) in dry THF (5 ml) was added di-*tert*-butyl-*N,N*-diisopropylphosphoramidate (538.5 mg, 2.16 mmol, 4 eq.). After stirring under argon at RT for 3h, H<sub>2</sub>O<sub>2</sub> (30%, 10 eq.) was slowly added at 0°C with vigorous stirring. The reaction mixture was stirred for further 30 min, followed by addition of saturated sodium thiosulfate solution (5 ml). The organic layer was separated and the aqueous phase was extracted with ether (3 x 20 ml). The combined organic extracts were washed with brine, dried over MgSO<sub>4</sub>, and evaporated to dryness. Purification by flash chromatography (AcOEt / hexane 1:1) affords (+/-) phosphoric acid di-*tert*-butyl ester 2-methyl-4-{2-[4-(3-phenoxypropoxy)-phenyl]-ethyl}-4,5-dihydro-oxazol-4-ylmethyl ester as colorless crystals. Finally, to a solution of phosphoric acid di-*tert*-butyl ester 2-methyl-4-{2-[4-(3-phenoxypropoxy)-phenyl]-ethyl}-4,5-dihydro-oxazol-4-ylmethyl ester (50 mg, 0.089 mmol) in ethanol (5 ml) was added conc. HCl (5 ml). The reaction mixture was stirred at 50°C for 2 hours, then concentrated to dryness. The residue was re-dissolved in AcOEt and precipitated with hexanes. The solid was filtered off, washed with dry ether and dried in vacuo to afford (+/-) mono phosphoric acid mono-{2-amino-2-hydroxymethyl-4-[4-(3-phenoxypropoxy)-phenyl]-butyl} ester as a colorless powder. ESI+ MS:  $m/z = 426.4$  (M-H)<sup>+</sup>.

The compounds of formula I in free form or in pharmaceutically acceptable salt form, exhibit valuable pharmacological properties, e.g. lymphocyte recirculation modulating properties, e.g. as indicated in in vitro and in vivo tests and are therefore indicated for therapy.

#### A. In vitro

The compounds of formula I have binding affinity to individual human S1P receptors as determined in following assays:

#### Sphingosine-1-phosphate (S1P) receptor profiling

Agonist activities of compounds are tested on the human S1P receptors EDG-1 ( $\text{S1P}_1$ ), EDG-3 ( $\text{S1P}_3$ ), EDG-5 ( $\text{S1P}_2$ ), EDG-6 ( $\text{S1P}_4$ ) and EDG-8 ( $\text{S1P}_5$ ). Functional receptor activation is assessed by quantifying compound induced GTP [ $\gamma\text{-}^{35}\text{S}$ ] binding to membrane protein prepared from transfected CHO or RH7777 cells stably expressing the appropriate

human S1P receptor. The assay technology used is SPA (scintillation proximity based assay). Briefly, DMSO dissolved compounds are serially diluted and added to SPA- bead (Amersham-Pharmacia) immobilised S1P receptor expressing membrane protein (10-20  $\mu\text{g}/\text{well}$ ) in the presence of 50 mM Hepes, 100 mM NaCl, 10 mM  $\text{MgCl}_2$ , 10  $\mu\text{M}$  GDP, 0.1% fat free BSA and 0.2 nM GTP [ $\gamma$ - $^{35}\text{S}$ ] (1200 Ci/mmol). After incubation in 96 well microtiterplates at RT for 120 min, unbound GTP [ $\gamma$ - $^{35}\text{S}$ ] is separated by a centrifugation step. Luminescence of SPA beads triggered by membrane bound GTP [ $\gamma$ - $^{35}\text{S}$ ] is quantified with a TOPcount plate reader (Packard).  $\text{EC}_{50}$ s are calculated using standard curve fitting software. In this assay, the compounds of formula I have a binding affinity to S1P<sub>1</sub> receptor <50 nM.

The term "fixed combination" means that the active ingredients, e.g. a compound of formula I and a co-agent, are both administered to a patient simultaneously in the form of a single entity or dosage. The term "non-fixed combination" means that the active ingredients, e.g. a compound of formula I and a co-agent, are both administered to a patient as separate entities either simultaneously, concurrently or sequentially with no specific time limits, wherein such administration provides therapeutically effective levels of the 2 compounds in the body of the patient. The latter also applies to cocktail therapy, e.g. the administration of 3 or more active ingredients.
